Its time to quit, make the call 613*592*6305

A recent study suggests that most smokers would like to quit but they don't think they can.

Over 12,000 people were asked why they smoked and over 90% of them said they would like to quit but they

Well here is some good news. You **CAN** quit. If you smoke, or know someone who does, direct them to this

and click on - "article in new scientist journal" at the bottom of the smoking cessation information.

This talks about a study comparing the analysis of over 600 other studies involving 72,000 people

& the most effective way to stop smoking.....and guess what.....Hypnosis is the most successful

way. Period! If you are trying Hypnosis for the first time, just know that 99.9% of the population can be hypnotized, and we have a 90% success rate.

In March /05 **WE were on the New RO (now called A-Channel)** along with a Health nurse from the City of Ottawa. Dave hypnotized a lady to quit smoking (the TV station picked her) and the health nurse helped 2 people try to quit with the patch. We were back on TV in three weeks to see how the people were doing. One lady on the patch did not quit at all, the other one quit but was quite agitated and admitted to having severe withdrawal symptoms & cravings. Our client was smoke free with no cravings, no withdrawal, no weight gain, only positive symptoms ie; more energy, smelled better, etc;. The statistics are clear. **We have a 90% success rate.**

Need we say more? Don't be a statistic. ***Its time to live! You can do it! Call now! 613*592*6305***

We look forward to meeting you & helping you succeed.
